

HUDSON VALVE 1/4" MOUNTING BRACKET

Mounting Instructions

- Slide the bracket onto the valve cap and tighten the set screw.
- To attach to your application, use either the provided bolt or a bolt or screw from the hardware store that meets your specific needs.
- The bracket can be mounted with the slotted side either up (A) or down (B), based on the needs of your specific application.
- Secure the bracket to the side of your application, making sure it is firmly in place, so that the valve cannot move.
- The valve will shut off when the water level reaches approx. 1/2" up from the bottom of the valve. So make sure the bracket is mounted at the appropriate height to shut off at the desired level.
