

General

MYSON **GEM** series towel warmers are constructed of superior grade stainless steel, available in a polished or a matte finish. All models utilize a dry element resistance cable that is woven through the entire interior of the towel warmers during the assembly process. The wattage of each element is specifically matched to the model and size of each unit to provide a constant, even surface temperature over the entire unit. All factory joints are spot welded to insure durability and stability through years of use. Each unit is controlled by a lighted on/off rocker switch located at the top of the right side vertical bar. All **GEM** towel warmers are 120V 60Hz and have a heavy duty, white, integral power cord that extends up to 4 feet. Every unit is supplied with a wall mounting kit complete with all hardware required for installation. An optional **Hard Wire Kit** is available for all models.

MYSON **GEM** series towel warmers are available three distinct models in several sizes to fit every design criteria.

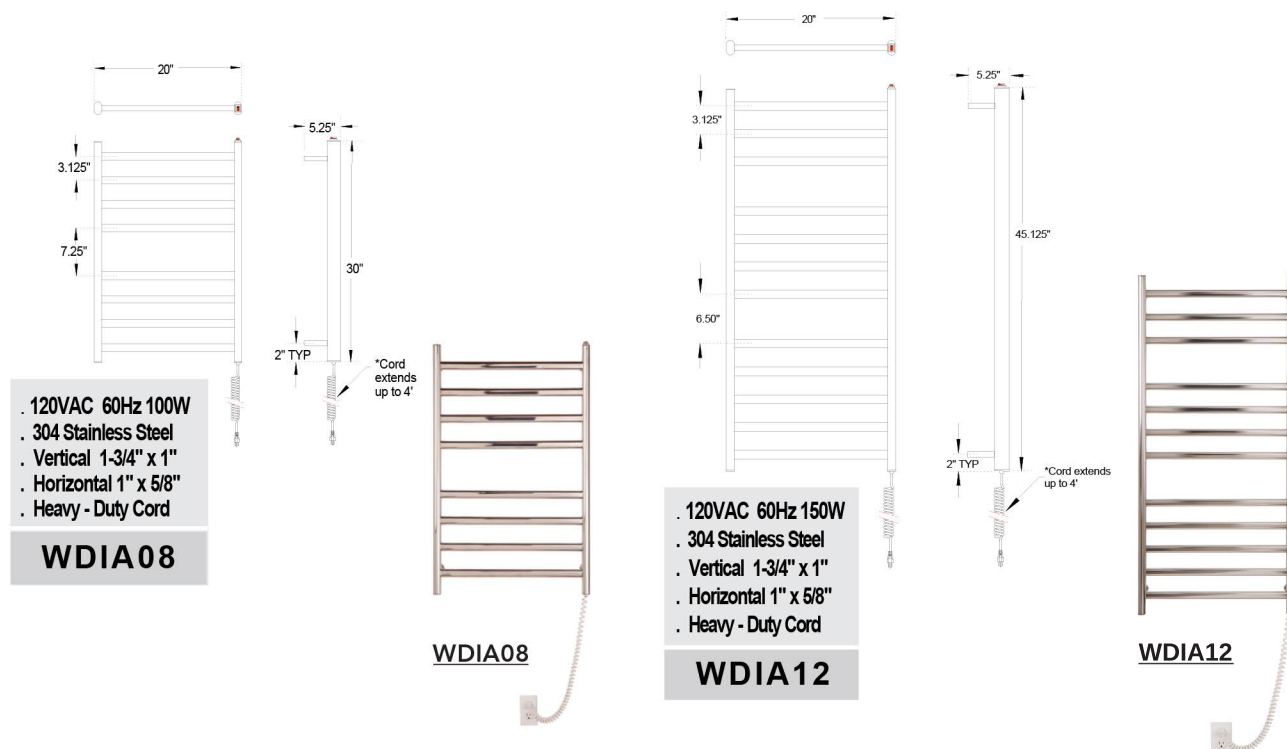

DIAMOND:

The DIAMOND Model is available in 3 wall mount sizes.

PEARL models are 20 inches wide with heights of 16¹/₂, 30 and 45 inches and are constructed of high quality 304 stainless steel with ovalesque horizontal and vertical bars.

Finishes:

All models are available in either a bright polished or a brushed matte finish.
